

Operational, Impact-based Flood ForeCasting and Real-time intelligence

FloodMapp

building a safer future

FloodMapp

Mission

Localized flood forecasts to:
Improve Public Safety.
Mitigate damage.

We work actively with agencies in AU and US to successfully enhance preparedness, response and recovery.

- **Government** - Local, state, federal
- **Critical infrastructure** to help restore our power and community access.

DASH Hydraulics

Live, **operational** impact intelligence

Purpose built **for emergency management**

Operational - real-time situational awareness with **24/7 hourly updates** to reflect changing conditions using live rainfall & flood sensor data

Flood **extent, depth, and impacts** delivered via API into any GIS system.

Scalable from **property level** to **national** scale.
10m - 1m resolution.

Validated & Operational

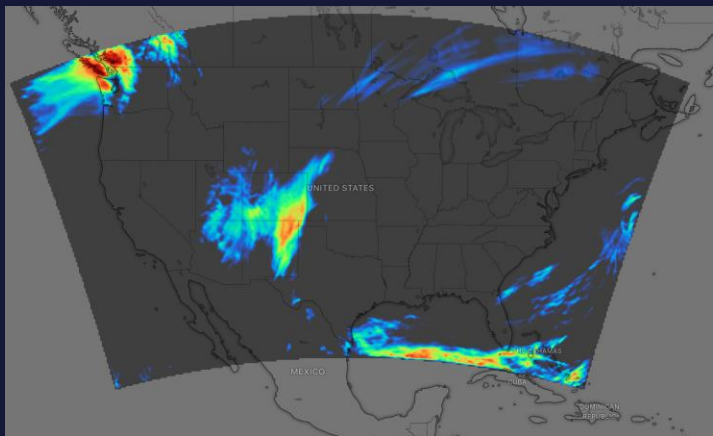

Successfully saving lives and **prevented millions in losses.**

Input Data

FloodMapp collects 4 main categories of data as inputs to FloodMapp DASH – our ground-breaking proprietary hydrology and hydraulics modelling technology.

2. Surface Water Observations – 60,000 stations and counting

1. Meteorology Data

3. Digital Elevation Models

4. Ground Truth Validations

Intelligence – Before, During, After

Hurricane Helene, FL

During Hurricanes Helene and Milton, FloodMapp's solutions delivered real-time flood intelligence in the SEOC that supported FDEM in a rapid response and recovery - backed by up to **90%** model accuracy.

Flood Extent

Validation - Milton

Flooding at 303 Magnolia St, Port Orange FL was flooded in Volusia County during Hurricane Milton – taken from FDEM High Water Mark dataset.

This corresponded well with FloodMapp PostCast.
